

FOR IMMEDIATE RELEASE:

iCrystalBot unveils the MyLuvBot – the Internet Interactive Sex Robot

Newport Beach, CA/US

iCrystalBot announces the first, fully mobile, artistically designed personal Sex Robot that's designed for erotic interaction between a robot and a person – the MyLuvBot™.

We are introducing the MyLuvBot to the adult entertainment industry for use by Internet interactive content providers and video studios.

The robot can be controlled over the Internet creating the capability of remote cybersex interaction between a patron and the girl. Interactive Web content providers can use it to provide real-time live interaction between paying customers and webcam girls.

For the Internet companies - customers would purchase time where they would control the robot to interact sexually with the girls. Multiple video feeds provide real-time images of the robot and the webcam girl interacting – teledildonics realized.

In addition to the primary customer controlling the robot, video feeds can be sold to other patrons to view the robot/girl action. It is the first of a whole new world of interactive Internet sex robot business models.

Operationally, the MyLuvBot is controlled over the Internet by a mouse which enables the user to control the robot's motion across the floor and initiate various pre-programmed erotic movements to interact with her.

Aesthetically, the robot's design is a hybrid of a manta ray and an orchid. It is made of a new crystalline material that iridesces, with blue and magenta colors rippling through it. The surface shimmers with exotic hues. The robot moves with a fluid grace – gliding across the floor as if it were a living sea creature.

The MyLuvBot has crystal-like rods atop the sculpture that hold in place the sex toys, which can be swapped out for others through a custom designed quick-release mechanism. The robot can be controlled to glide across surfaces towards the girl and has pre-programmed movements that cause rhythmic thrusts to be initiated by a person over the Internet.

The MyLuvBot is not just a new sex toy, but an entire new business model.

iCrystalBot has designed robots for the special effects industry and aerospace – undersea robots for NASA/NOAA. iCrystalBot® is a registered trademark of iCrystalBot.

Attached is a picture of our robot.
